

Verato — Beta Tester Guide

What is Verato? Verato is your Chief of Staff's command centre. It automatically extracts every commitment made in meetings, assigns it an owner, tracks the deadline, scores how at-risk it is, and nudges the owner before it slips. No more chasing people or losing track of what was promised.

Getting Started

Step 1 — Create your account Go to the app URL and click **Register**. Enter your name, email, and password. You will receive a verification email — click the link to activate your account. This creates your organisation in Verato — you are the admin.

Step 2 — Complete the onboarding flow After activating your account, Verato walks you through a two-step setup: - **Connect Slack** — Authorise Verato to send nudge DMs to commitment owners. You can skip this and connect later from Settings. - **Import your existing tracker** — Upload a spreadsheet, document, or CSV of existing commitments so Verato can start with your current backlog rather than from zero. You can also paste text directly. Skip if you are starting fresh.

Step 3 — Connect your calendar and meeting tools Go to **Settings** and connect the integrations that apply to your team: - **Google Calendar** — Verato automatically detects Google Meet calls when they end, pulls the transcript from Drive, and processes it. No upload needed. - **Zoom** — Once connected, completed cloud recordings trigger processing automatically via webhook. - **Gmail** — Verato reads replies to nudge emails and updates commitment status automatically. - **Slack** — Verato sends nudge DMs and reads owners' replies in the thread.

Step 4 — Upload your first meeting (or let auto-ingest do it) If your calendar is connected, Verato will pick up new meetings automatically. You can also click **Upload** from the dashboard to paste a transcript or upload a `.txt`, `.docx`, or `.csv` file. Processing takes 15–30 seconds. The **Import Tasks** button on the dashboard lets you import from an existing tracker at any time, not just during onboarding.

Step 5 — Review and confirm commitments After processing, go to the meeting and review the extracted commitments. Each one shows the owner, deadline, and a confidence score. Confirm the ones that look right, edit any that need fixing (owner, deadline, wording), and reject anything that isn't actually a commitment.

Core Features to Test

Dashboard Your main view. Shows commitments grouped by status: Overdue, At Risk, On Track. Filter by priority, tag, or owner. Click any commitment to open the detail view.

Commitment Detail Full view of a single commitment — the original text, normalised version, owner, deadline, risk score, and full history of every action taken. You can reassign the owner, change the deadline, escalate, resolve (done / deferred / cancelled), or reopen it.

Import Tasks Available from the **Import Tasks** button on the dashboard at any time. Upload a spreadsheet, document, or CSV of existing commitments and Verato will extract them with AI just like a meeting transcript. Useful for migrating your current backlog on day one or importing a batch of commitments from an offline source.

Manual Nudge On any commitment, click **Nudge**. Choose your method — Slack DM, Email, Phone, In Person. If Gmail is connected, email sends directly from your Gmail account. All nudges are logged in the commitment history so there is a full record.

Log Manual Update On any commitment, use **Log Update** to record a response you received outside the system — a verbal update in a meeting, a WhatsApp message, a note from a call. The update is saved to the commitment history with a timestamp, keeping the full paper trail in one place.

Automatic Nudges with Reply Parsing Verato sends automatic nudge DMs via Slack and emails via Gmail on a schedule. When an owner replies — "done", "pushing to next week", "I'm blocked on X" — Verato reads the reply once daily at 08:00 UTC, parses the intent with Gemini AI, and updates the commitment status automatically. If the reply is ambiguous, the CoS receives a notification with the full reply text and can decide what to do.

Slack Interactive Buttons Slack nudge DMs include three action buttons the owner can tap directly in Slack: **Done**, **Need more time**, or **Blocked**. Tapping a button updates the commitment instantly — no reply needed.

Auto-Ingestion (Google Meet + Zoom) Once your Google Calendar or Zoom is connected, new meetings flow into Verato automatically: - Google Meet calls end → Verato finds the transcript in Drive within 15 minutes and processes it - Zoom cloud recordings complete → webhook fires, Verato processes the recording immediately

Check the **Meetings** list to see the status of each ingested meeting (Pending / Processing / Done / Failed).

Strategic Initiatives Group related commitments under strategic themes — Q3 Product Launch, Board Prep, Hiring Plan, etc. Any tag can be promoted to a Strategic Initiative with a description. The Initiatives view shows per-status commitment counts (Active, At Risk, Escalated, Done) and an AI-generated 2–3 sentence health summary per initiative. The summary only regenerates when commitments have changed since the last one.

Tags and Auto-tagging Every commitment can carry one or more tags. Tags are created inline as you type — no pre-configuration needed. On any commitment, click **Auto-tag** to have Gemini suggest and apply tags from your existing tag library. Admins can rename, merge, promote, or delete tags via the Tags management panel.

Risk Score Breakdown The risk score on each commitment now shows a full breakdown: how much of the score comes from deadline proximity (50%), the owner's historical delivery rate (35%), and how recently the

commitment was updated (15%). This turns the score from a black box into an actionable signal.

Directory See everyone who makes commitments in your meetings — they receive nudges but don't need a Verato account. Use the **Add to Directory** button to add someone manually or import your Slack workspace members. Merge duplicate records if the same person appears under two names.

Delegation A CoS can delegate meeting ownership to a colleague (e.g., a senior EA or department lead). Go to **Settings → Delegation** and assign a delegate. They receive an email invitation and an in-app notification. Once accepted, they can manage commitments from meetings assigned to them.

Meetings Full list of all uploaded and auto-ingested meetings with processing status. Click into any meeting to see the transcript, participants, and all commitments extracted from it.

In-App Notifications The bell icon in the top nav shows your personal notification feed: - When a Slack or Gmail reply comes in on a commitment you own or manage - When a commitment you created is marked done or deferred - When someone accepts a delegation invite - When a meeting finishes processing

Settings - Slack — Connect your Slack workspace. Once connected, automatic nudge DMs go to owners on the schedule you set. Slack users can be searched and linked to Person records. - **Gmail** — Connect your Gmail account. Verato sends nudge emails from your address and reads owner replies automatically. -

Google Calendar — Connect your calendar to enable Google Meet auto-ingestion. - **Zoom** — Connect your Zoom account to enable Zoom recording auto-ingestion. - **Team** — Invite colleagues, resend or revoke pending invitations. - **Nudge Schedule** — Set when automatic reminders fire: first nudge (1, 2, or 5 days before deadline), second nudge (24, 48, or 72 hours before), then daily nudges for days +1, +2, +3 overdue. Toggle the whole engine on/off.

What to Look For

Please test and give feedback on:

1. **Onboarding flow** — Does the two-step setup (Slack → Import) feel intuitive for a new user? Is anything confusing or missing?
2. **Extraction quality** — Did Verato find all the real commitments? Did it miss any? Did it pick up anything that wasn't a commitment?
3. **Owner matching** — Did it correctly identify who owns each commitment?
4. **Deadline resolution** — If someone said "by end of Thursday" did it resolve to the right date?
5. **Auto-ingestion** — If your calendar is connected, does the meeting appear and process within 15 minutes of it ending?
6. **Tracker import** — Upload a spreadsheet of existing commitments — does Verato extract them accurately?
7. **Reply parsing** — Reply to a Slack nudge DM or email nudge with "done" or "need another week" — does Verato pick it up correctly the next morning?

8. **Slack buttons** — Tap Done or Need More Time on a Slack nudge — does the commitment update immediately?
 9. **Commitment actions** — Confirm, escalate, resolve, reopen — do they feel right?
 10. **Log Manual Update** — Log a verbal update you received outside the system — does the history capture it clearly?
 11. **Nudge flow** — Does the Slack DM arrive? Does the email send from your Gmail?
 12. **Risk score breakdown** — Does the breakdown (deadline / owner track record / recency) match your intuition about why a commitment is at risk?
 13. **Strategic Initiatives** — Does grouping commitments by initiative help you see the health of a theme at a glance?
 14. **Auto-tag** — Does Gemini's tag suggestion match what you would have chosen manually?
 15. **Notifications** — Do in-app notifications appear at the right times for the right people?
-

Known Limitations (Beta)

- **Slack nudges** require the org admin to connect Slack and enable the nudge engine in Settings first
 - **Gmail and Slack reply parsing** runs once daily at 08:00 UTC — not instant; Slack interactive buttons (Done / Need More Time / Blocked) update immediately
 - **Google Meet auto-ingest** requires the meeting organiser to have Google Workspace with transcription enabled in Drive; if transcription is off, Verato will detect this and fall back to manual upload
 - **Zoom auto-ingest** requires Zoom cloud recording to be enabled on the account
 - **Tag management** (rename, merge, delete) is admin-only — regular users can add and view tags
 - **Initiative AI summaries** regenerate at most once every 12 hours unless new commitment activity is logged
 - The app is in active development — some rough edges expected
